

GIS Technician

A GIS forester manages geographic information systems (GIS) to support land management and other forestry activities. GIS is a leading technology in the natural resources profession. It results from the organization of geographic information into computer databases and analysis software, which allows for statistical analysis, calculations, custom map production, and many other manipulations to support planning, development, and research projects for working forests.

Other job titles include: GIS Analyst, GIS Administrator, GIS Coordinator.

Education & Training

Most of these occupations require a four-year bachelor's degree, but some do not
